PRESS RELEASE

Fleetwater Marine launches Revolutionary Outboard Jet Propulsion System

Winner of NMMA Innovation Award, IBEX Miami, Florida, USA

Fleetwater Marine Ltd is pleased to announce it has been appointed UK representative for the revolutionary **JetPac™ Outboard Jet Propulsion System**. **JetPac™** is a completely self-contained outboard mounted marine jet propulsion system. It has a large diameter water jet completely enclosed within positive buoyancy, fibreglass shell, that offers high thrust, quieter and more efficient performance than current jet propulsion systems – ideal for RIBS.

JetPac™ Outboard Jet Propulsion System is an innovation in marine propulsion; a patented technology that is clearly unconventional yet offers significant improvements over existing water jet designs.

The main features of **JetPac™ Outboard Jet Propulsion System** are

- Ideal for RIBS, tenders, military and commercial vessel
- Low purchase and installation cost compared to conventional jet drive systems
- Easy installation to boat's transom without structural modification
- Easy installation on more than 85% of small to medium sized boats
- Large diameter jet providing quick acceleration and superior low speed manoeuvrability
- Excellent fuel economy
- Outboard mounting frees up boat interior space
- Easy engine access and maintenance
- Easy access and maintenance of removable single cartridge jet assembly

Tim Fleming of Zodiac USA Military and Professional Marine Sector says..."I have tried the **JetPac™** on 2 different boats so far and on each I was impressed with the ease in which the boat got out of the hole even with heavy loads. The directional manoeuvrability is outstanding for a water jet even at low speeds."
